

PROJECTION**HOLOSCREEN
INTERACTIVE**

The MediaScreen Holo Interactive 66" is the latest evolution of the popular WTH 65" Holo Interactive. Like its forerunner model WTH 65" Holo Interactive, the new Holo Interactive 66" has filigree design and high-quality material mix as well as interactivity through precise capacitive touch sensors. The holographic presentation system has a 66" diagonal screen size in the contemporary 16:10 aspect ratio. The depth was reduced again to now 52 cm.

The touch control takes place by means of a precise capacitive touch sensor with USB interface for PC or MAC. The mechanically coupled screen-projector configuration allows the simple, continuously adjustment of the vertical viewing angle. The rollable stand thereby serves for the keeping of content sources such as laptop or PC.

FEATURES & FUNCTIONS

- Transparent HoloScreen in 16:10 aspect ratio
- Precise touch sensor incl. control software
- Universal Interface for PC and MAC
- Control via touch of the transparent screen
- Brilliant and high-contrast display
- Homogeneous and grid-free display
- Optional: 3-D capability and gesture control

TECHNISCHE DATEN

Screen Diagonal	66"/180 cm (16:10)
Size (HxWxD)	190 x 150 x 52 cm (inclined)
Weight	approx. 115 kg
Projector	1 Chip DLP, WXGA ca. 3.100 Ansi-Lumen
Material	Aluminum / Stainless steel
Format	Video and data
Optional	3-D capability contact-free gesture control
