

SCREENLIFTER 152
DISPLAY SYSTEM
PRELIMINARY VERSION!

OUT NOW! SCREENLIFTER 152 – THE FIRST AND BEST X-TREME LARGE SCREEN DISPLAY HANDLING SYSTEM WORLDWIDE!

Using the ScreenLifter 152 the handling and setup of the newest generation of Panasonic TH-152UX1 large-screen-displays becomes a mere child's play. Touching a button, the up to 600 kg heavy display unloads itself out of the flight-case. Thanks to the heavy duty and precise drive unit, the installation-height of the display is continuously variable.

The ScreenLifter 152 combines a design stand and - due to the three integrated shock absorbing systems – a secure and comfortable transport and handling-system that allows the tool-free setup by one hand instead of crane or fork truck.

The setup is even more secure, because the display stays always tight attached to the stand. This protects your valuable display and saves precious assembly time, expensive heavy duty equipment and personnel costs in one step.

FEATURES & FUNCTIONS

- Electrical height adjustable
- Electrical self unload function
- Electrical inclination function
