

PROJECTION

HOLOSCREEN
INTERACTIVE

The MediaScreen Holo Interactive 68" HD is an advancement of the popular and unique HoloInteractive 66". Like its predecessor, the HoloInteractive 68" HD features its futuristic design and a premium mix of materials, as well as unlimited interactivity thanks to the precise IR-light-insensitive capacitive touch sensor technology.

The new holographic presentation system features bright 4400 ANSI-Lumens in Full HD-WUXGA (1920 x 1200) resolution, which makes it even better for use in bright ambient light such as trade fairs, events or showrooms.

The navigation takes place by means of a capacitive touch foil. The mechanically coupled screen-projector configuration ensures a simple and adjustment-free setup of the vertical viewing angle. The integrated roll-up pedestal is used to stow playback devices such as PC, media player or Mac.

FEATURES & FUNCTIONS

- Transparent HoloScreen in 16:10 aspect ratio
- Precise touch sensor incl. control software
- Universal Interface for PC and MAC
- Control via touch of the transparent screen
- Brilliant and high-contrast display
- Homogeneous and grid-free display
- Optional: 3-D capability and gesture control
- Available in all RAL colors

TECHNICAL DATA

Screen Diagonal	68"/173 cm (16:10)
Size (HxWxD)	190 x 150 x 52 cm (inclined)
Weight	approx. 115 kg
Projector	3-LCD, Full HD-WUXGA 1920 x 1200 4.400 ANSI-Lumen
Material	Aluminum / Stainless steel
Format	Video and data
Optional	3-D capability contact-free gesture control
